

Editorial

The second issue of the 12th volume of the "Educ@tional Circle" offers us a rich mix of articles covering a wide range of educational topics. From early childhood to higher education, the featured articles delve into issues related to pedagogical practices, teacher professional development, education policy, and the role of technology in the educational process.

The central axis of the articles is the search for innovative approaches and the use of research to solve real problems in the classroom. The authors examine issues such as intercultural education, emotional intelligence, the effects of addictions on school communities and Europe's role in shaping young people's identities.

It is encouraging that researchers are turning their attention to action, looking for solutions based on reliable data. The interdisciplinary approach that characterizes many of the studies highlights the importance of collaboration in addressing the complex challenges of modern education.

As we are in an era of rapid changes, education is called upon to respond to new challenges and adapt to a constantly changing environment. The findings in this issue provide us with valuable tools to address these challenges and build a better future for generations to come.

It is important to note that education is not only a process of imparting knowledge, but also a process of character and value formation. Schools must cultivate in students the skills that will enable them to function as active citizens in a globalized society.
